

*"It's a very good opportunity for my twin boys to be ready for these classes of Robotics. It's a Future world, and as early as now, they are being encouraged to learn and have knowledge about this. It's fun, wonderful experience. Definitely a place where they could stimulate their brain to be more amazed and curious at the same time. Thank you Afro Canadian Development Inc and supporting companies for making this possible for my kids. Kudos to the program organizer!"*

*"My daughter loves these sessions. It helped her to develop an interest in coding and robotics."*

*"My son and his friend had a really nice time doing robotics. The session booked was STEM for beginners which went well with his age. They also gave a kit to work after this session was done. The staff was friendly and thoughtful. Looking forward to seeing more of these sessions in the future."*
